SUMMARY

Skilled Senior Software Engineer with 5+ years of experience in developing innovative software solutions. Expertise in deploying AI-powered microservices, optimizing system performance, and leading cross-functional teams. Proficient in front-end and back-end technologies, cloud, and DevOps, committed to delivering high-quality solutions that enhance user experience and business goals.

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Aspire Software – Beirut, Lebanon

May 2025 – Present

Aspire delivers enterprise digital solutions. Worked as a Senior Software Engineer on **PCR360**, an **IT management platform** focused on system monitoring, data intelligence, and operational automation for enterprise environments.

- Designed and implemented an AI-powered anomaly detection to identify unusual behavior across IT and operational data, enabling proactive issue detection and improved system reliability.
- Developed an **AI-driven SQL Query Chatbot** that allows IT and operations teams to query system and management data using natural language, reducing technical barriers and accelerating insights.
- Built an **intelligent form and query generation system**, enabling dynamic data collection, validation, and structured reporting within the IT management workflows.
- Optimized backend services and database queries to handle large volumes of system and monitoring data while maintaining performance and stability.
- Contributed to architectural and DevOps decisions where I enhanced the IAC (Infrastructure as Code) for reusable infrastructure and resources.

Software Engineer | Intalio – Dbayeh, Lebanon

September 2023 – February 2025

Intalio is dedicated to driving organizational success through innovation. By leveraging cutting-edge technologies and advanced business solutions, they stay ahead of the competition and prioritize customer satisfaction.

- Design and develop advanced software solutions, collaborating with the Product Team to enhance system features and improve overall user experiences effectively.
- Build and deploy microservices powered by AI and machine learning models, significantly boosting system intelligence, predictive analytics, and workflow automation.
- Work with the AI Team to optimize machine learning algorithms, improving the accuracy of predictive models and enabling insightful data-driven decision-making.
- Design scalable architectures for microservices, ensuring high performance, fault tolerance, and seamless integration with existing platform components.

Senior Software Engineer | Justech – Lebanon

May 2019 – Present

Working as a Senior Software Engineer at my brother's startup, specializing in providing software engineering services.

- Lead the development and deployment of customized software solutions for clients, ensuring high performance and scalability by leveraging modern technologies such as microservices and cloud platforms.
- Collaborate with the development team to create and maintain efficient code for various client projects, ensuring seamless integration with existing systems and optimizing performance for enhanced user experience.

Software Engineer | Kamkalima – Beirut, Lebanon

December 2022 – August 2023

"KamKalima" is a platform for learning and teaching in schools. It empowers Arabic classrooms with tools and resources, supporting students with 21st-century skills and inspiring teachers to excel.

- Developed and implemented unit tests for back-end systems, resolving issues early and ensuring functionality.
- Assisted in designing, coding, and deploying new features, transforming initial concepts into efficient solutions while maintaining system stability.

- Improved platform performance by analyzing application bottlenecks and implementing optimization techniques, ensuring better user engagement and response times.
- Collaborated with cross-functional teams to align development efforts with business goals, contributing to overall project success and user satisfaction.

Software Developer | Cirrus (An ITG Company) – Beirut, Lebanon

April 2022 – December 2022

Cirrus, part of ITG (Holding), offers cloud computing and managed services, covering private, public, and hybrid cloud deployments. Their solutions ensure secure infrastructure, optimal performance, and high availability.

- Built a web application platform using Vue.JS, Laravel, and Microsoft SQL Server, delivering an intuitive and efficient user interface for clients.
- Designed and implemented an internal ERP system to streamline resource management, enhancing operational efficiency and reducing manual workload.
- Improved system reliability by performing rigorous testing and deploying robust solutions for critical business processes.

- Built an events website and ERP system using ReactJS, MongoDB, PHP, and Laravel, showcasing versatility in full-stack development.
- Contributed to 3+ team projects and completed 10+ GitHub exercises, applying agile methodologies to ensure project quality and timely delivery.
- Organized, tracked, and managed daily tasks on Trello, following Scrum principles to maintain progress and team collaboration effectively.

- Developed and deployed diverse web applications, including e-commerce platforms and content management systems, utilizing Laravel, MySQL, and Blade, resulting in streamlined business processes.
- Engineered dynamic and responsive front-end interfaces using React, enhancing user experience and contributing to faster page loading time.
- Implemented and maintained containerized environments using Docker, streamlining application deployment and ensuring consistent performance across development, testing, and production stages.

PROJECTS

LaraUtilX – Laravel Package

January 2024 – Present

A utility-focused Laravel package built to simplify and enhance development workflows by providing pre-built functionalities and reusable components. It aims to reduce repetitive tasks and increase efficiency for developers working on Laravel-based projects.

Technologies used: Laravel, MySQL.

Jobly – Job Hunting Platform ([backend](#), [frontend](#))

November 2021 – February 2022

A comprehensive job hunting platform designed to connect job seekers with employers in a seamless and efficient manner. The platform includes advanced features, such as the ability for job seekers to book meetings directly with employers within the platform, fostering effective communication and faster recruitment processes.

Technologies used: Vue.js, Laravel, Laravel Blade, MySQL.

ERP Backend – ERP System

August 2021 – September 2021

A robust backend system for an ERP application tailored to streamline and automate business processes for small and medium-sized companies. It focuses on improving operational efficiency and enabling centralized management of business functions such as finance, inventory, and human resources.

Technologies used: Laravel, MySQL.

EDUCATION

Bachelor of Science in Computer Science | Lebanese International University (LIU)

October 2021 – Present

SKILLS

Front End: HTML5, CSS3, Tailwind CSS, JavaScript, ReactJS, Redux, NextJS, AngularJS.

Back End: PHP, Laravel, NodeJS, Python, Flask, GraphQL.

Databases: Microsoft SQL Server, MySQL, MongoDB.

DevOps: AWS, Terraform, Linux.

Other Tools: WordPress, Git, Agile Methodologies, Personal Development.

Technical skills: Microservices, AI (Artificial Intelligence), Machine Learning, Predictive Analytics, Workflow Automation, Back-End Systems, Unit Testing, System Optimization, Cloud Computing, ERP System, Web Application, Full-Stack Development, Version Control (Git), Trello (Project Management), Database Management, Version Control, Cross-Functional Collaboration.

Soft skills: Problem-solving, Communication (verbal and written), Collaboration, Teamwork, Leadership, Accountability, Time Management, Adaptability, Critical Thinking, Analytical Skills, Creativity, Attention to Detail.

LANGUAGES

Arabic (native), **English** (fluent), **French** (intermediate).
